[redacted]

Senior Data Engineer

[redacted] · Born [redacted]

SUMMARY

Data engineer with 7 years of experience building reliable batch and streaming pipelines for retail and logistics companies. I care about data contracts, observability and pipelines that are boring to operate. Comfortable owning a platform end to end, from ingestion to the models analysts use every day.

EXPERIENCE

Lead Data Engineer, Harbourline Logistics 2021 - present

- Designed and operate 40+ Airflow DAGs moving 2 TB a day into BigQuery on GCP.
- Migrated the order events stream from cron jobs to Kafka, cutting latency from 6 hours to 4 minutes.
- Introduced data contracts and dbt tests that cut broken dashboards by 70% in a year.
- Mentor three engineers; run the team's design reviews.

Data Engineer, Brightmart Retail 2017 - 2021

- Built Spark jobs in Python for store-level demand features used by the forecasting team.
- Wrote and tuned the SQL models behind weekly sales reporting for 300 stores.
- Moved nightly batch jobs from on-premise Hadoop to managed Spark, halving run time.

Junior Data Analyst, Brightmart Retail 2016 - 2017

- Automated weekly Excel reports with Python and SQL.

SKILLS

Python, SQL, Airflow, Spark, Kafka, dbt, BigQuery, GCP, Terraform, Docker, Great Expectations

EDUCATION

BSc Computer Science, University of [redacted] 2016

CERTIFICATIONS

Google Cloud Professional Data Engineer, 2022
